

Chronic Back Pain Relief Without Drugs or Surgery

Houston, TX, 06-12-08 -- Spinal Aid Centers of America representative, Dr. Steven Smith will be hosting free workshops through the end of 2008 to Houston Metro Corporations to introduce their employees to the scientific discovery that relieves chronic back pain and works without drugs or surgery.

A safe alternative to invasive procedures, Spinal Decompression works with special computer assisted equipment; to help eliminate pressure that builds up, thus alleviate pain. Many people are finding non-surgical, non-drug Spinal Decompression the solution, where all else has failed. This scientific discovery is now available to the public in the Houston Metro area.

Spinal Aid Centers of America is rapidly becoming branded, as it is the first and only health care franchise to focus on the needs of the chronic and severe back pain sufferer. Dr. Smith chose to work with the nationwide franchise because of their firm policies and procedures, which aligned well with his own high standards of practice in patient care and satisfaction.

Houston Metro Corporations interested in these free workshops should contact Spinal Aid Centers of America's Spring office to coordinate at 281-376-1288.
